

AN APPROACH TO MINIMIZE WORST-CASE QUEUEING  
DELAY FOR A SWITCHING COMMUNICATION SYSTEM  
WITH TRANSMISSION CONSTRAINTS

5

ABSTRACT OF THE DISCLOSURE

An approach for minimizing queueing delay of packets is disclosed.  $M$  number of queues are configured to store packets. A memory stores a search order table that has table entries corresponding to the  $M$  queues. Specifically, the table entries store values that correspond to relative positions of the  $M$  queues and that are selected based upon a transmission constraint of the communication system. A scheduler is coupled to the memory and is configured to schedule transmission of the packets stored in the  $M$  queues based upon the search order table. According to one embodiment of the present invention, this queueing mechanism is applied in a satellite communication system with transmission constraints to the downlink cells.
